

S/V ADINA

Black Water Handling Certificate

Adina is a Hylas 46 sailing yacht built in Taiwan in 2008 with British registration 915388. She was professionally built with two black water holding tanks as an integral part of the vessel design. Black water is directed to either one of the holding tanks, one in the forward heads and one aft in the aft heads. Each holding tank is capable of storing up to 27 gallons of black water. Black water from the holding tank can either be pumped out or the tanks can be opened when the vessel is offshore; this is managed through valves with locks to ensure correct use.

I certify this to be 100% true and correct.
